

## Browser Market Shares

As of 04/16/10

The browser shares are definitely beginning to shift: IE6 & 7 are both on the decline as Chrome seems to be overtaking them. We wouldn't be surprised to see Chrome move onto the Priority 1 list in the near future.

Priority 1	Priority 2	Priority 3
FF*: 22-25% IE6: 20-22% IE8: 20-22%  <i>*versions have been considered together</i>	IE7: 14-16% Safari: 4-7% Chrome: 6-8%	Opera: 1% iPhone: .5%  <b>OLD BROWSERS - (forget 'em!)</b> IE5 (PC & MAC): <1%

## The World Of Mobile Browsing

Check out what's happening in the mobile browsing world!

**Skyfire:** A mobile browser that runs on Windows Mobile (smartphones and PPC) letting you browse the web using the full-featured PC versions of your favorite websites. (<http://www.skyfire.com>)

**Andriod:** A mobile development platform created by Google. Andriod offers all the "intuitive pizzazz" that Google is known for, right on your mobile device. It is also the only true competitor to the iPhone. (<http://www.android.com>)

**Bolt:** A WebKit based browser directed towards "lower end" (i.e. non-smart) phones, allowing even the most basic mobile user to view the web in all it's glory. (<http://www.boltbrowser.com>)
